PromptFunds

Save what you can.
Borrow when you need.

A licence-safe digital savings wallet and lending platform for cooperatives — free to join, fully online, accounting-grade underneath.

Pitch deck · November 2026

THE PROBLEM

Cooperative savers are underserved by the tools they're given

Paper and office visits

Members queue to deposit, wait days to learn their balance, and apply for loans on forms. Trust erodes when records are slow or opaque.

Predatory digital credit

Loan apps fill the gap with hidden fees and abusive recovery — the reason the FCCPC tightened digital lending rules in 2025.

Licence mismatch

Off-the-shelf wallets come with transfer features a lending licence does not cover, creating regulatory risk for cooperatives.

30M+ Nigerians belong to cooperative societies

THE SOLUTION

One mobile-first platform: join, save, earn, borrow

01

Free membership

Register online in minutes, no fee, no minimum deposit, BVN verified electronically.

02

Savings wallet

Personal deposit account number, real-time balances, daily-accrued interest.

03

Fair loans

Apply from the phone; clear rate, fee and schedule before accepting; repay from savings.

04

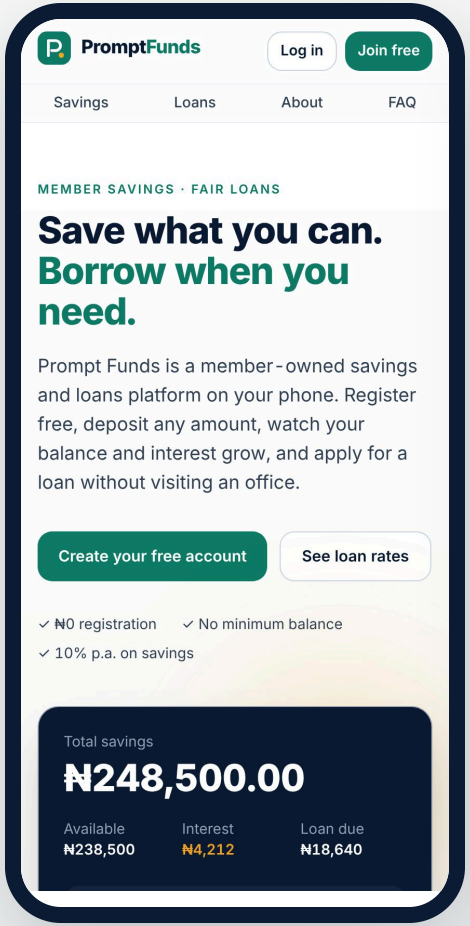

Control room

KYC, withdrawals, credit decisions, liquidity, PAR and audit trail for staff.

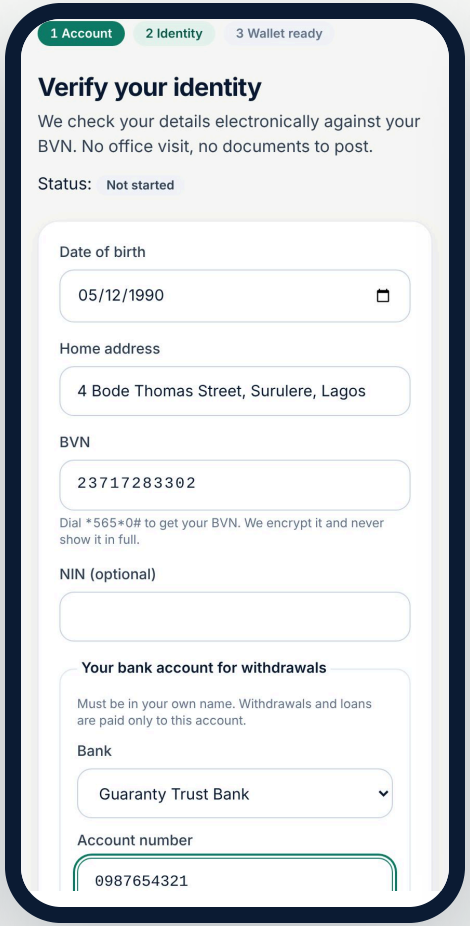

Guiding principle: a member can register, deposit, see the balance, withdraw and apply for a loan without visiting an office.

MEMBER EXPERIENCE

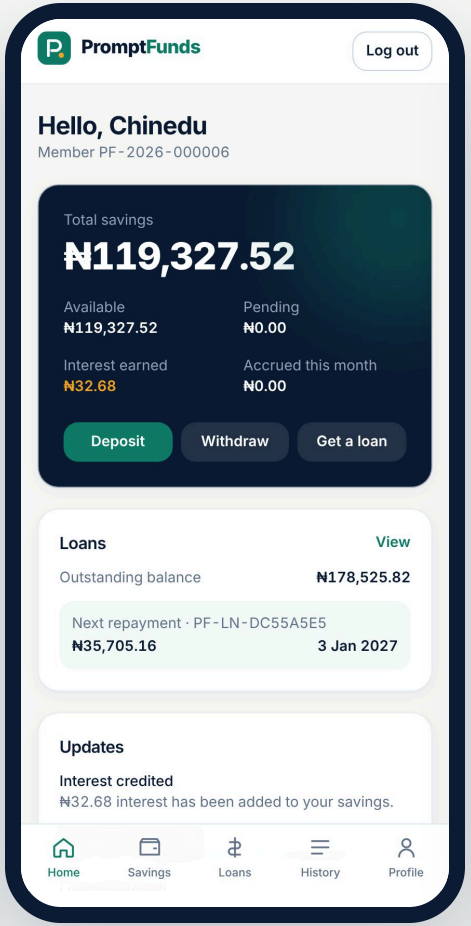

Built for a ₦60,000 Android phone on mobile data

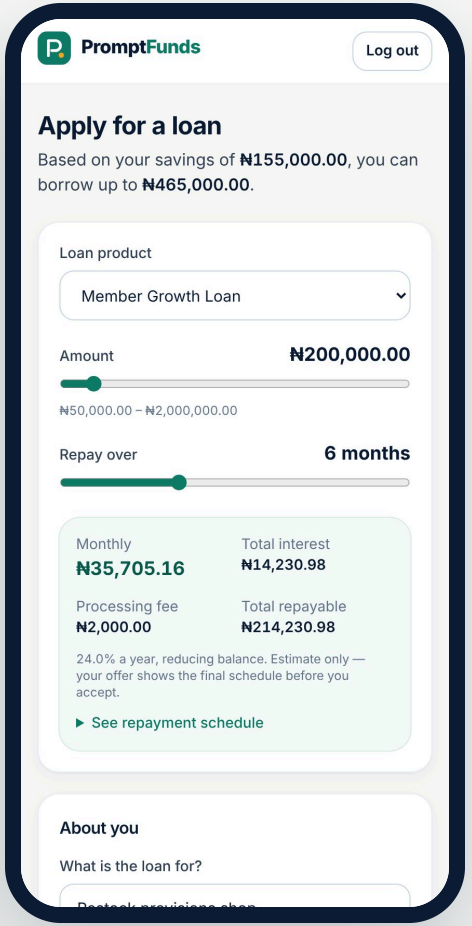

Public site

Verify with BVN

Dashboard

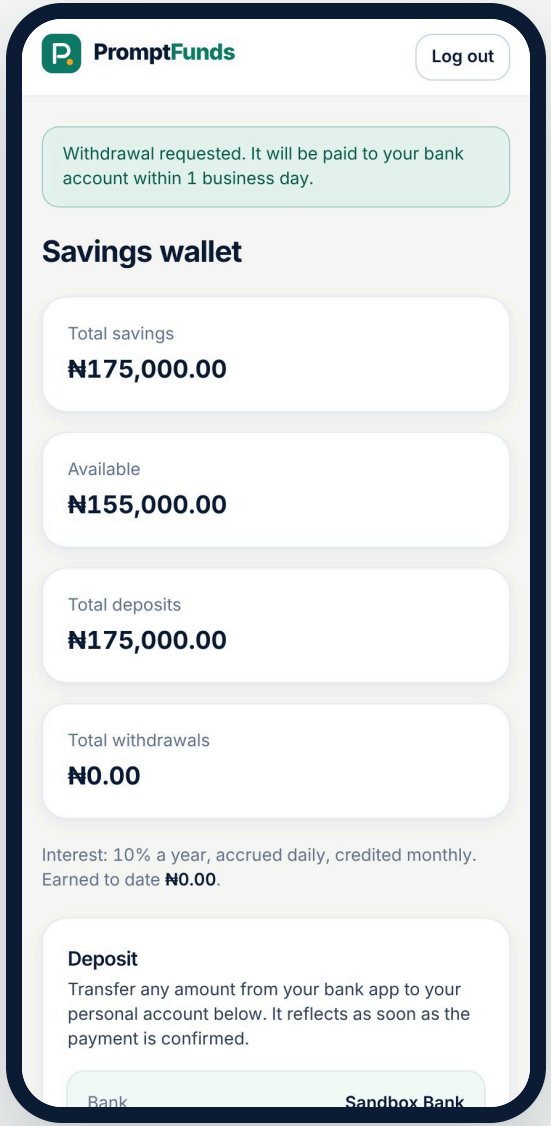

Loan calculator

LICENCE-SAFE BY DESIGN

A lending licence, not a payments licence — the product respects that

Allowed	Not built, not exposed
Deposits into the member’s own wallet	Member-to-member transfers
Withdrawals to the member’s own, name-verified bank account	Payouts to third parties
Loan disbursement to own account	Bills, airtime, cards, “send money”
Repayment from own savings	Any inter-bank transfer feature

> Enforced in code: the payment adapter has no generic transfer function; payout accounts change only through staff verification.

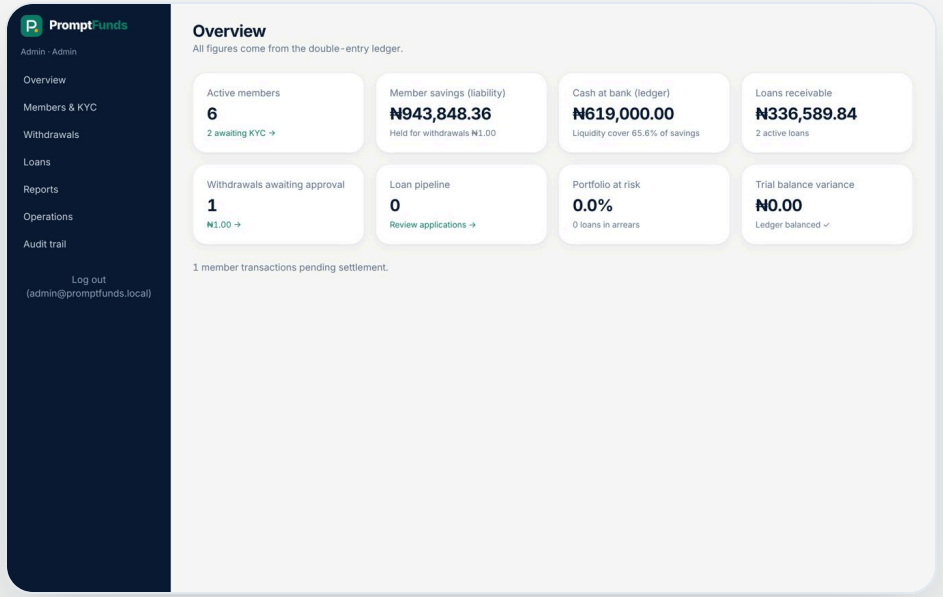

ACCOUNTING-GRADE CORE

Every naira on screen ties to the books

- **Double-entry ledger** — the database itself rejects unbalanced or edited entries
- **Idempotent money flows** — webhook replays and double taps never double-post
- **Maker-checker** on KYC, withdrawals, loan approval and disbursement
- **Live KPIs** — liquidity cover, portfolio at risk, trial balance variance
- **Hash-chained audit trail** for examiners and auditors

> End-to-end tested: register → KYC → deposit → concurrent withdrawals → loan → repayment → interest; trial balance stays at ₦0.00.

BUSINESS MODEL

Income from lending and permitted investments funds savings interest and operations

Illustrative year — 10,000 members	₦m
Loan interest (₦480m avg. book @ 24%)	115
Processing fees (1% of disbursements)	10
Investment income (₦240m @ 15%)	36
Total income	161
Interest on savings (₦800m @ 8%)	(64)
Expected loan losses (3%)	(14)
Payment processing	(30)
Technology & support	(15)
Staff & operations	(25)
Surplus before reserves	13

Assumptions: average savings ₦80,000/member; 60% of savings lent; T-bill-type yield 15%. Illustrative only — rates are set by the board-approved policy.

Sensitivities that matter

- ✔ Deposit fees are the largest variable cost — negotiate DVA caps, encourage fewer larger deposits
- ✔ Every +1pt of savings rate costs ~₦8m a year at this scale
- ✔ Each 1% of extra loan losses costs ~₦5m
- ✔ Free registration stays a core principle

WHY NOW

Regulation and rails have caught up

Clear lending rules

The FCCPC's DEON Consumer Lending Regulations 2025 require registration and fair conduct — favouring transparent, member-owned lenders.

Dedicated virtual accounts

Payment partners now issue each customer a permanent account number, so transfers reconcile automatically.

Electronic identity

BVN/NIN verification APIs make remote onboarding fast and cheap, without office visits.

Data protection

Built for the Nigeria Data Protection Act 2023: encrypted identity numbers, consent, access logs.

Serverless economics

Hosting starts at tens of dollars a month and scales with usage.

Web first

No app-store cost at launch; native apps when volume justifies.

TECHNOLOGY

Modern, lean and portable

Next.js 14 · React · TypeScript
Public site, member portal, admin portal and API in one codebase

PostgreSQL 16 (Neon) · Prisma 7
ACID ledger, SQL triggers & constraints, trigram search; no native binaries

Paystack · Dojah adapters
Dedicated accounts, payouts, BVN — swappable for Monnify / Prembly

Netlify
Git-push deploys, previews, scheduled interest & arrears jobs; Dockerfile for any cloud

Security
scrypt passwords, AES-256-GCM field encryption, maker-checker, staff MFA, rate limits, pen test

Quality
Type-checked, unit-tested money maths, browser end-to-end journey test

ROADMAP

Savings first, then lending — about 20 weeks to full launch

Wk 1–9

Regulatory & banking

Licence scope, FCCPC, policies, payment & KYC partners

Wk 1–10

Design & core build-out

Live integrations, MFA, notifications, statements

Wk 9–12

Hardening & UAT

Financial UAT, pen test, DR drill, training

Wk 13–14

Savings pilot

50–200 members, capped limits

Wk 13–18

Digital lending

Products, agreements, collections, lending UAT

Wk 19–20

Go-live & hypercare

Gradual limits, daily PAR & liquidity

Later: savings goals · fixed deposits · guarantors & credit bureau · React Native apps · USSD · BI dashboards

THE ASK

Fund the launch of Prompt Funds

IMPLEMENTATION

₦19.0m

Dedicated build, phased over ~20 weeks (or ₦4.5m setup on the managed platform)

RUN & SUPPORT

from ₦450k/mo

Support retainer + third-party costs (~₦1m/mo at 2,000 members)

READINESS

Working software

End-to-end platform already running; review a live staging site, not slides

Next steps

1. Confirm licence scope and start FCCPC registration
2. Approve savings & lending policies (rates, limits)
3. Open collections/payouts accounts with the payment partner
4. Kick-off workshop → branded staging site in 10 business days

PromptFunds
